

# PosLink 1.0.3.168 Release Notes

01/08/2019

# Release Summary

## Enhancements

### POSLINK-476 Design my night table integration improvements

Added labels to the table info screen

When pressing media type deposit it will prompt if we find a deposit matching the table booking

Added new function 271 – Update Table Status. This allows you to manually set the status of a table

Added new parameter to interfaces – Table reservations – Ignore open status. Having this enabled will never send the open status when opening new tables.

### POSLINK-340 Show Journal on full screen mode keyboard

The option Full Screen Mode in keyboard has been replaced with a drop down of the following items:

Normal – Displays keyboard as normal

Full – Displays keyboard full screen (as per the old check box option)

Partial – Displays keyboard over function bar but shows journal

On upgrading to this version the Full option will be enabled if previously you had the checkbox show full screen enabled

### POSLINK-531 Add cardno and cardnohash to transactionXML

Added <cardno> and <cardnohash> XML tags to the transaction XML feed

# Release Summary

## Fixes

### POSLINK-548 Track Locks released on print bill function from table plan

Fixed issue where pressing print bill on an open table releases the track lock so any other terminal could open that table. If you opened a table, then went to the table plan, highlight the current open table, press print bill. This would release the track lock on that table and allow two terminals to open the same table.

### POSLINK-544 Make backup the master to detecting other terminals

Fixed issue when using the function "Make backup the master". The function would not detect other terminals this is due to machines having multiple IP addresses and it was scanning using the incorrect IP address.

### POSLINK-541 bottomlogo.bmp causes delay in printing

Fixed issue when bottomlogo.bmp exists there is a large delay before the bill/receipt is printed
